

INSTALLING AND FLUFFING SMALL BOWS

Bow Fluffing

● Unpack the bow from the box and begin to fluff

● Reshape so the loops of the bow look puffy and the tails look curved and dimensional

- On the backside of the bow, slip a wire through the center loop and check that it is oriented correctly for attachment

- Carefully attach the bow to the frame or main foliage coil part of the décor item

- Snip the extra plastic off the back with scissors or cutters so the bow and décor look their best

- Make one last bit of effort to shape and fluff the bow to insure that it will look perfect
